NAME

Padre::Logger − Compile−time logging library for Padre

SYNOPSIS

```
# In the launch/dev.pl script
BEGIN {
    $Padre::Logger::DEBUG = 1;
}

use Padre;

# In each Padre::Foo class
use Padre::Logger;

sub method {
    TRACE('->method') if DEBUG;

    # Your code as normal
}
```

DESCRIPTION

This is a logging utility class for Padre. It provides a basic set of simple functionality that allows for logging/debugging/tracing statements to be used in Padre that will compile out of the application when not in use.
