

**NAME**

Padre::Task::Outline::Perl – Perl document outline structure info gathering in the background

**SYNOPSIS**

```
# by default, the text of the current document
# will be fetched as will the document's notebook page.
my $task = Padre::Task::Outline::Perl->new;
$task->schedule;

my $task2 = Padre::Task::Outline::Perl->new(
    text      => Padre::Current->document->text_get,
    editor    => Padre::Current->editor,
);
$task2->schedule;
```

**DESCRIPTION**

This class implements structure info gathering of Perl documents in the background. Also the updating of the GUI is implemented here, because other languages might have different outline structures. It inherits from Padre::Task::Outline. Please read its documentation!

**SEE ALSO**

This class inherits from Padre::Task::Outline which in turn is a Padre::Task and its instances can be scheduled using Padre::TaskManager.
