

Padre::Transform::Perl::UpdateCopyright(3pm)

NAME

Padre::Transform::Perl::UpdateCopyright – Demonstration Padre::Transform class

SYNOPSIS

```
my $transform = Padre::Transform::Perl::UpdateCopyright->new(
    name => 'Adam Kennedy'
);

$transform->apply( Padre::Current->document );
```

DESCRIPTION

Padre::Transform::Perl::UpdateCopyright provides a demonstration of a typical Padre::Transform class.

This class implements a document transform that will take the name of an author and update the copyright statement to refer to the current year, if it does not already do so.

METHODS

new

```
my $transform = PPI::Transform::UpdateCopyright->new(
    name => 'Adam Kennedy'
);
```

The new constructor creates a new transform object for a specific author. It takes a single name parameter that should be the name (or longer string) for the author.

Specifying the name is required to allow the changing of a subset of copyright statements that refer to you from a larger set in a file.

name

The name accessor returns the author name that the transform will be searching for copyright statements of.

TO DO

- May need to overload some methods to forcefully prevent Document objects becoming children of another Node.

SUPPORT

See the support section in the main module.
