## NAME

Padre::Wx::HtmlWindow – Padre–enhanced version of Wx::HtmlWindow

## DESCRIPTION

`Padre::Wx::HtmlWindow` provides a Padre-specific subclass of Wx::HtmlWindow that adds some additional features, primarily default support for pod2html functionality.

## METHODS

`Padre::Wx::HtmlWindow` implements all the methods described in the documentation for Wx::HtmlWindow, and adds some additional methods.

### load_file

```
$html_window->load_file( 'my.pod' );
```

The `load_file` method takes a file name, loads the file, transforms it to HTML via the default Padre::Pod2HTML processor, and then loads the HTML into the window.

Returns true on success, or throws an exception on error.

### load_file

```
$html_window->load_pod( "=head1 NAME\n" );
```

The `load_file` method takes a string of POD content, transforms it to HTML via the default Padre::Pod2HTML processor, and then loads the HTML into the window.

Returns true on success, or throws an exception on error.

## SUPPORT

See the main Padre documentation.
