NAME

Opening/Closing –

Ordering driver is a transform driver and thus has to be used on top of a transport driver. Ordering driver is a transform driver and thus has to be used on top of a transport driver.

An XIO handle with the ordering driver can be created with either **globus_xio_handle_create()** or **globus_xio_server_register_accept()**.

When the XIO handle is closed, the ordering driver will destroy its internal resources.
