NAME

pack_fputs − Writes a string to the stream. Allegro game programming library.

SYNOPSIS

#include <allegro.h>

int pack_fputs(const char *p, PACKFILE *f);

DESCRIPTION

Writes a string to the stream ‘f’. The input string is converted from the current text encoding format to UTF-8 before writing. Newline characters are written as ‘\r\n’ on DOS and Windows platforms. If you don’t want this behaviour, use pack_fwrite() and/or pack_putc() instead.

RETURN VALUE

Returns zero on success or a negative number on error.
