

NAME

ExtUtils::XSpp::Node::File – Directive that sets the name of the output file

DESCRIPTION

An ExtUtils::XSpp::Node subclass representing a directive to change the name of the output file:

```
%file{file/to/write/to.xs}
```

A special case is

```
%file{-}
```

which indicates that output should be written to STDOUT.

METHODS**new**

Creates a new ExtUtils::XSpp::Node::File.

Named parameters: `file`, the path to the file that should be written to (or `'-'`).

ACCESSORS**file**

Returns the path of the file to write to (or `-` for STDOUT).
