

SYNOPSIS

```
#include "fcgi_stdio.h"

void
FCGI_SetExitStatus(int status);
```

DESCRIPTION

Sets the exit status for the current FastCGI request.
The exit status is the status code the request would have
exited with, had the request been run as a CGI program.

You can call FCGI_SetExitStatus several times during a request;
the last call before the request ends determines the value.
