

Fedora::Rebuild::Package::ListLog(3) User Contributed Perl Documentation Fedora::Rebuild::Package::ListLog(3)

Fedora::Rebuild::Package::ListLog – Append a package name to a file

SYNOPSIS

```
# Prepare a package
use threads::shared;
use Fedora::Rebuild::Package;
my $package = Fedora::Rebuild::Package->new(...);
$package->provides(shared_clone(...));

{
    # Create a log file
    my $log = Fedora::Rebuild::Package::ListLog->new(file => 'file');

    # Log the package into a file
    $log->log($package);
}
# Here the log file has been closed
```

DESCRIPTION

The class allows to append a Fedora::Rebuild::Package name into a file in a safe way.

METHODS

new(file => \$file_name)

This class method appends the `$package` name into the `$file_name`. Mandatory attribute is `log`, a file where to log the package names to.

log(\$package)

Append Fedora::Rebuild::Package package name into the log file. This operation is atomic.
