

MooseX::Declare::Context::Namespaced(3pm) | MooseX::Declare::Context::Namespaced(3pm)

NAME

MooseX::Declare::Context::Namespaced – Namespaced context

DESCRIPTION

This context trait will add namespace functionality to the context.

ATTRIBUTES

namespace

This will be set when the `strip_namespace` method is called and the namespace wasn't anonymous. It will contain the specified namespace, not the fully qualified one.

METHODS

strip_namespace

`Maybe[Str] Object->strip_namespace()`

This method is intended to parse the main namespace of a namespaced keyword. It will use `Devel::Declare::Context::Simple`'s `strip_word` method and store the result in the “namespace” attribute if true.

qualify_namespace

`Str Object->qualify_namespace(Str $namespace)`

If the `$namespace` passed it begins with a `:`, it will be prefixed with the outer namespace in the file. If there is no outer namespace, an error will be thrown.
