

MooseX::Declare::Syntax::EmptyBlockIfMissing(3pm) MooseX::Declare::Syntax::EmptyBlockIfMissing(3pm)

NAME

MooseX::Declare::Syntax::EmptyBlockIfMissing – Handle missing blocks after keywords

DESCRIPTION

The MooseX::Declare::Syntax::NamespaceHandling role will require that the consumer handles the case of non-existent blocks. This role will inject an empty block with only the generated code parts in it.

METHODS

handle_missing_block

Object->handle_missing_block (Object \$context, Str \$body, %args)

This will inject the generated code surrounded by { ... } into the code where the keyword was called.
