

Munin::Node::Configure::HostEnumeration(3pm) - User Contributed Perl Documentation
Munin::Node::Configure::HostEnumeration(3pm)

NAME

Munin::Node::Configure::HostEnumeration - Takes a list of hosts, and returns the corresponding IPs in dotted-quad form.

SYNOPSIS

```
@hosts = ('switch1', 'host1/24', '10.0.0.60/30');
foreach my $host (expand_hosts(@hosts)) {
    # ...
}
```

SUBROUTINES

expand_hosts

```
@expanded = expand_hosts(@list);
```

Takes a list of hosts, and returns the corresponding IPs in dotted-quad form.

Items can be specified as a hostname or dotted-quad IP, either with or without a netmask.

Currently only IPv4 addresses are supported.
