

NAME

MySQL::Diff::Utils – Supporting functions for MySQL::Diff

SYNOPSIS

```
use MySQL::Diff::Utils qw(debug_level debug);
```

DESCRIPTION

Currently contains the debug message handling routines.

FUNCTIONS**Public Functions**

Fuller documentation will appear here in time :)

- `debug_file($file)`

Accessor to set/get the current debug log file.

- `debug_level($level)`

Accessor to set/get the current debug level for messages.

Current levels range from 1 to 4, with 1 being very brief processing messages, 2 providing high level process flow messages, 3 providing low level process flow messages and 4 providing data dumps, etc where appropriate.

- `debug`

Writes to debug log file (if specified) and STDERR the given message, provided is equal to or lower than the current debug level.
