

NAME

`mq_close` – close a message queue descriptor

SYNOPSIS

```
#include <mqqueue.h>
```

```
int mq_close(mqd_t mqdes);
```

Link with `-lrt`.

DESCRIPTION

`mq_close()` closes the message queue descriptor *mqdes*.

If the calling process has attached a notification request to this message queue via *mqdes*, then this request is removed, and another process can now attach a notification request.

RETURN VALUE

On success `mq_close()` returns 0; on error, `-1` is returned, with *errno* set to indicate the error.

ERRORS**EBADF**

The descriptor specified in *mqdes* is invalid.

CONFORMING TO

POSIX.1-2001.

NOTES

All open message queues are automatically closed on process termination, or upon `execve(2)`.
