

Dancer2::Core::Role::SessionFactory::File(3pm) - contributed Perl Documentation
 Dancer2::Core::Role::SessionFactory::File(3pm)

NAME

Dancer2::Core::Role::SessionFactory::File – Role for file–based session factories

VERSION

version 0.160003

DESCRIPTION

This is a specialized SessionFactory role for storing session data in files.

This role manages the files. Classes consuming it only need to handle serialization and deserialization.

Classes consuming this must satisfy three requirements: `_suffix`, `_freeze_to_handle` and `_thaw_from_handle`.

```
package Dancer2::SessionFactory::XYX

use Moo;

has _suffix => (
    is      => 'ro',
    isa     => 'Str',
    default => sub { '.xyz' },
);

with 'Dancer2::Core::Role::SessionFactory::File';

sub _freeze_to_handle {
    my ($self, $fh, $data) = @_;

    # ... do whatever to get data into $fh

    return;
}

sub _thaw_from_handle {
    my ($self, $fh) = @_;
    my $data;

    # ... do whatever to get data from $fh

    return $data;
}

1;
```

ATTRIBUTES**session_dir**

Where to store the session files. Defaults to “./sessions”.
