NAME

Dancer::Hook – Class to manipulate hooks with Dancer

VERSION

version 1.3140

SYNOPSIS

```
# inside a plugin
use Dancer::Hook;
Dancer::Hook->register_hooks_name(qw/before_auth after_auth/);
```

DESCRIPTION

Manipulate hooks with Dancer

METHODS

register_hook ($hook_name, [$properties], $code)

```
hook 'before', {apps => ['main']}, sub {...};

hook 'before' => sub {...};
```

Attaches a hook at some point, with a possible list of properties.

Currently supported properties:

apps

an array reference containing apps name

register_hooks_name

Add a new hook name, so application developers can insert some code at this point.

```
package My::Dancer::Plugin;
Dancer::Hook->instance->register_hooks_name(qw/before_auth after_auth/);
```

hook_is_registered

Test if a hook with this name has already been registered.

execute_hooks

Execute a list of hooks for some position

get_hooks_for

Returns the list of coderef registered for a given position
