

Module::Depends::Intrusive(3pm)   User Contributed Perl Documentation   Module::Depends::Intrusive(3pm)

**NAME**

Module::Depends::Intrusive – intrusive discovery of distribution dependencies.

**SYNOPSIS**

```
# Just like Module::Depends, only use the Intrusive class instead
```

**DESCRIPTION**

This module devines dependencies by running the distributions Makefile.PL/Build.PL in a faked up environment and intercepting the calls to Module::Build->new and ExtUtils::MakeMaker::WriteMakefile.

You may now freak out about security.

While you're doing that please remember that what we're doing is much the same that CPAN.pm does in order to discover prerequisites.

**AUTHOR**

Richard Clamp, based on code extracted from the Fotango build system originally by James Duncan and Arthur Bergman.
