NAME

Module::Package::RDF − drive your distribution with RDF

SYNOPSIS

In your Makefile.PL:

```
use inc::Module::Package 'RDF';
```

That's all folks!

DESCRIPTION

Really simple Makefile.PL.

FLAVOURS

Currently this module only defines the `:standard` flavour.

:standard

This is the default, so the following are equivalent:

```
use inc::Module::Package 'RDF';
use inc::Module::Package 'RDF:standard';
```

In addition to the inherited behavior, this flavour uses the following plugins:

- AutoLicense
- AutoManifest
- Copyright
- Credits
- DOAP
- DOAPChangeSets
- RDF
- ReadmeFromPod
- TrustMetaYml

And sets `static_config` and `sign`.

BUGS

Please report any bugs to <http://rt.cpan.org/>.
