

Module::Starter::Plugin::DirStore(3pm) User Contributed Perl Documentation Module::Starter::Plugin::DirStore(3pm)

NAME

Module::Starter::Plugin::DirStore -- module template files in a directory

VERSION

version 0.144

SYNOPSIS

```
use Module::Starter qw(
    Module::Starter::Simple
    Module::Starter::Plugin::Template
    Module::Starter::Plugin::DirStore
    ...
);

Module::Starter->create_distro( ... );
```

DESCRIPTION

This Module::Starter plugin is intended to be loaded after Module::Starter::Plugin::Template. It implements the `templates` method, required by the Template plugin. The DirStore plugin stores all the required templates as files in a directory.

METHODS

templates

This method reads in the template files and populates the object's `templates` attribute. The module template directory is found by checking the `MODULE_TEMPLATE_DIR` environment variable and then the config option "template_dir".
