

MojoMojo::Formatter::CPANHyperlink(3pm) contributed Perl Documentation MojoMojo::Formatter::CPANHyperlink(3pm)

NAME

MojoMojo::Formatter::CPANHyperlink – automatically hyperlink CPAN modules when using the syntax `{cpan Some::Module}`

DESCRIPTION

Normally, to hyperlink to a CPAN module, you'd write:

```
[MojoMojo::Formatter::CPANHyperlink](http://search.cpan.org/perl/doc?MojoMojo::
```

This plugin lets you write just

```
{cpan MojoMojo::Formatter::CPANHyperlink}
```

Just like POD, it supports adding a section after the module name:

```
{cpan Catalyst::Manual::Cookbook/Deployment}
```

will create a link to

```
http://search.cpan.org/perl/doc?Catalyst::Manual::Cookbook#Deployment
```

Sections can contain any characters, except two consecutive closed braces:

```
{cpan Catalyst::Test/($res, $c) = ctx request( ... ); }
```

will link to

```
http://search.cpan.org/perl/doc?Catalyst::Test#($res,_$c)_=_ctx_request(_..._)
```

In anticipation of future plugin syntax, you can optionally add a trailing slash

```
{cpan Some::Module/Section /}
```

METHODS

format_content_order

The CPANHyperlink formatter has no special requirements in terms of the order it gets run in, so it has a priority of 10.

format_content

Calls the formatter. Takes a ref to the content as well as the context object.

SEE ALSO

MojoMojo and Module::Pluggable::Ordered.
