module_loaded
Return true if the module is loaded.

NAME

MojoMojo::Formatter::SyntaxHighlight − syntax highlighting for code blocks

DESCRIPTION

This formatter performs syntax highlighting on code blocks.

METHODS

format_content_order
The syntax highlight formatter is based on `<pre>` tags entered by the user, so it must run before other formatters that produce `<pre>` tags. The earliest such formatter is the main formatter.

format_content
This formatter uses Syntax::Highlight::Engine::Kate to syntax highlight code inside of `<pre lang="language"> ... </pre>` tags:

```
<pre lang="Perl">
  say "Hello world!";
</pre>
```

See ‘‘PLUGINS’’ in Syntax::Highlight::Engine::Kate for a list of supported languages.

SEE ALSO

MojoMojo, Module::Pluggable::Ordered and Syntax::Highlight::Engine::Kate.
