

MooseX::Adopt::Class::Accessor::Fast(3pm) [Use Contributed Perl Documentation](#) MooseX::Adopt::Class::Accessor::Fast(3pm)

NAME

MooseX::Adopt::Class::Accessor::Fast –
Hijack Class::Accessor::Fast in %INC;

SYNOPSIS

```
use MooseX::Adopt::Class::Accessor::Fast;  
use CAF::Using::Module;  
#that's it! JustWorks
```

DESCRIPTION

This module attempts to hijack Class::Accessor::Fast in %INC and replace it with MooseX::Emulate::Class::Accessor::Fast. Make sure it is loaded before the classes you have that use <Class::Accessor::Fast>. It is meant as a tool to help you migrate your project from Class::Accessor::Fast, to MooseX::Emulate::Class::Accessor::Fast and ultimately, to Moose.

SEE ALSO

Moose, Class::Accessor::Fast, MooseX::Emulate::Class::Accessor::Fast
