

MooseX::Declare::Syntax::OptionHandling(3pm) MooseX::Declare::Syntax::OptionHandling(3pm)

NAME

MooseX::Declare::Syntax::OptionHandling – Option parser dispatching

VERSION

version 0.43

DESCRIPTION

This role will call a `add_foo_option_customization` for every `foo` option that is discovered.

METHODS

ignored_options

```
List[Str] Object->ignored_options ()
```

This method returns a list of option names that won't be dispatched. By default this only contains the `is` option.

REQUIRED METHODS

get_identifier

```
Str Object->get_identifier ()
```

This must return the name of the current keyword's identifier.

MODIFIED METHODS

add_optional_customizations

```
Object->add_optional_customizations (Object $context, Str $package, HashRef $op
```

This will dispatch to the respective `add_*_option_customization` method for option handling unless the option is listed in the “`ignored_options`”.
