

NAME

MooseX::KavorkaInfo – make Kavorka–>info available through Moose meta objects

SYNOPSIS

```
package Foo {
    use Moose;
    use MooseX::KavorkaInfo;
    use Kavorka qw( -default -modifiers );
    method xxx (Int $x) { return $x ** 3 }
}

package Foo::Verbose {
    use Moose;
    use MooseX::KavorkaInfo;
    use Kavorka qw( -default -modifiers );
    extends "Foo";
    before xxx { warn "Called xxx" }
}

my $method = Foo::Verbose->meta->get_method("xxx");
say $method->signature->params->[1]->type->name; # says "Int"
```

DESCRIPTION

MooseX::KavorkaInfo adds two extra methods to the Moose::Meta::Method meta objects associated with a class.

It “sees through” method modifiers to inspect the original method declaration.

Methods

`signature`
Returns a Kavorka::Signature object.

`declaration_keyword`
Returns a string indicating what keyword the method was declared with.

BUGS

Please report any bugs to <<http://rt.cpan.org/Dist/Display.html?Queue=Kavorka>>.
