

MooseX::MethodAttributes::Role::Meta::Role::Application(3pm)

## NAME

MooseX::MethodAttributes::Role::Meta::Role::Application – generic role for applying a role with method attributes to something

## VERSION

version 0.31

## METHODS

### apply

The apply method is wrapped to ensure that the correct metaclasses to hold and propagate method attribute data are present on the target for role application, delegates to the original method to actually apply the role, then ensures that any attributes from the role are copied to the target class.
