

MooseX::RelatedClassRoles(3pm) User Contributed Perl Documentation MooseX::RelatedClassRoles(3pm)

NAME

MooseX::RelatedClassRoles – Apply roles to a class related to yours

VERSION

version 0.004

SYNOPSIS

```
package My::Class;
use Moose;

has driver_class => (
    isa => 'MyApp::Driver',
);

with 'MooseX::RelatedClassRoles' => { name => 'driver' };

# ...

my $obj = My::Class->new(driver_class => "Some::Driver");
$obj->apply_driver_class_roles("Other::Driver::Role");
```

DESCRIPTION

Frequently, you have to use a class that provides some `foo_class` accessor or attribute as a method of dependency injection. Use this role when you'd rather apply roles to make your custom `foo_class` instead of manually setting up a subclass.

PARAMETERS**name**

A string naming the related class. `driver` in the “SYNOPSIS”. Required.

class_accessor_name

A string naming the related class accessor. `driver_class` in the “SYNOPSIS”. Defaults to appending `_class` to the name.

apply_method_name

A string naming the role applying method. `apply_driver_class_names` in the “SYNOPSIS”. Defaults to adding `apply_` and `_names` to the `class_accessor_name`.

BLAME

Florian Ragwitz (rafl)
