

NAME

MooseX::Storage::Util – A MooseX::Storage Swiss Army chainsaw

VERSION

version 0.52

DESCRIPTION

This module provides a set of tools, some sharp and focused, others more blunt and crude. But no matter what, they are useful bits to have around when dealing with MooseX::Storage code.

METHODS

All the methods in this package are class methods and should be called appropriately.

peek (\$data, %options)

This method will help you to verify that the serialized class you have gotten is what you expect it to be before you actually unfreeze/unpack it.

The `$data` can be either a perl HASH ref or some kind of serialized data (JSON, YAML, etc.).

The `%options` are as follows:

format

If this is left blank, we assume that `$data` is a plain perl HASH ref otherwise we attempt to inflate `$data` based on the value of this option.

Currently only JSON and YAML are supported here.

key The default is to try and extract the class name, but if you want to check another key in the data, you can set this option. It will return the value found in the key for you.

TODO

Add more stuff to this module :)

SUPPORT

Bugs may be submitted through the RT bug tracker <<https://rt.cpan.org/Public/Dist/Display.html?Name=MooseX-Storage>> (or `bug-MooseX-Storage AT rt DOT cpan DOT org` <<mailto:bug-MooseX-Storage AT rt DOT cpan DOT org>>).

There is also a mailing list available for users of this distribution, at <<http://lists.perl.org/list/moose.html>>.

There is also an irc channel available for users of this distribution, at `#moose` on `irc.perl.org` <<irc://irc.perl.org/#moose>>.
