

NAME

`modbus_get_header_length` – retrieve the current header length

SYNOPSIS

```
int modbus_get_header_length(modbus_t *ctx);
```

DESCRIPTION

The `modbus_get_header_length()` function shall retrieve the current header length from the backend.

This function is convenient to manipulate a message and so its limited to low-level operations.

RETURN VALUE

The header length as integer value.
