

mplist_get(3m17n)

The m17n Library

mplist_get(3m17n)

NAME

mplist_get – Get the value of a property in a property list.

SYNOPSIS

void* **mplist_get** (MPlist * *plist*, MSymbol *key*)

DESCRIPTION

Get the value of a property in a property list. The **mplist_get()** function searches property list **plist** from the beginning for a property whose key is **key**. If such a property is found, its value is returned as the type of (void *). If not found, **NULL** is returned.

When **NULL** is returned, there are two possibilities: one is the case where no property is found (see above); the other is the case where a property is found and its value is **NULL**. In case that these two cases must be distinguished, use the **mplist_find_by_key()** function.
