mtext_character(3m17n)

The m17n Library

mtext_character(3m17n)

NAME

mtext_character - Search a character in an M-text.

SYNOPSIS

int **mtext_character** (**MText** * *mt*, int *from*, int *to*, int *c*)

DESCRIPTION

Search a character in an M-text. The **mtext_character()** function searches M-text **mt** for character **c**. If **from** is less than **to**, the search begins at position **from** and goes forward but does not exceed (**to** - 1). Otherwise, the search begins at position (**from** - 1) and goes backward but does not exceed **to**. An invalid position specification is regarded as both **from** and **to** being 0.

RETURN VALUE

If c is found, $mtext_character()$ returns the position of its first occurrence. Otherwise it returns -1 without changing the external variable $merror_code$. If an error is detected, it returns -1 and assigns an error code to the external variable $merror_code$.
