

NAME

mtext_line_break – Find a linebreak position of an M–text.

SYNOPSIS

```
int mtext_line_break (MText * mt, int pos, int option, int * after)
```

DESCRIPTION

Find a linebreak position of an M–text. The **mtext_line_break()** function checks if position **pos** is a proper linebreak position of an M–text **mt** according to the algorithm of The Unicode Standard 4.0 UAX#14. If so, it returns **pos**. Otherwise, it returns a proper linebreak position before **pos**.

If **option** is nonzero, it controls the algorithm by logical–or of the members of **MTextLineBreakOption**.

If **after** is not NULL, a proper linebreak position after **pos** is stored there.
