

EXIT(1)

fish-shell

EXIT(1)

**NAME**

exit – exit the shell

**SYNOPSIS**

exit [STATUS]

**DESCRIPTION**

**exit** causes fish to exit. If **STATUS** is supplied, it will be converted to an integer and used as the exit status. Otherwise, the exit status will be that of the last command executed.

If exit is called while sourcing a file (using the source builtin) the rest of the file will be skipped, but the shell itself will not exit.

**COPYRIGHT**
